**SUBJECT: Bryston BDP-2 New Audio Device - Report**

June 2015

**Re: BDP-2 Digital Player with New Audio device.**

**Hi James**

**Installed the new Bryston sound card.**

**Performance of the new card:**

**This is an essential upgrade to the BDP-2, especially for systems having high resolution. The new card simply seems to stay out of the way of the music. I was jotting down a few notes while listening and the first noticeable improvement is how much quieter the background is, the noise floor has really been lowered (which I did not think possible after listening the first card).**

**The sound stage is huge, both in width and depth. There is greater delineation of fine musical details. Notes seem suspended on a cushion of air with the space between notes better delineated. Micro and macro dynamics are improved and impressive (likely due to the lowered noise floor). Very subtle fine details in music are clearly delineated with this card (no need to lean into the music, just sit back and lots of detail will unfold naturally). Pitch definition is improved, especially in the lower frequencies. There is improved extension, delineation, and definition of low frequencies.**

**All in all this is a card is a spectacular achievement and elevates the already fine performance of the BDP-2 to a new level. Highly recommended upgrade!**

**The new sound card renders music gloriously.**
